# U.S. Corporate Loan Market is a Vital Source of Capital for American Business

U.S. Corporate loan and loan commitments outstanding

U.S. Corporate loans outstanding

- According to government data, the U.S. syndicated loan market totals roughly \$2.5 trillion of committed lines and outstanding loans
- It is a key source of financing for many large and middle market companies in the U.S.
- Over one-third of outstanding loans are held by non-banks; half of those are held by CLOs

# **Dodd-Frank Act and the Bank Loan Market**

## **Loan Syndications & Trading Association Annual Conference**

***October 13, 2010***

# Uncertainty Still Prevails

# Uncertainty Still Prevails

- Regulators beginning a long and complex implementation process
- Dodd-Frank provisions affecting the bank loan market:
  - Suffer from greater than average vagueness and uncertainty
  - Are generally in the “first tranche” of the implementation effort (but it’s a very deep tranche)
- There are no answers to most of your questions
- Important things to know about the rule writers:
  - They are serious about thinking through the issues and creating rules that work for the market, although not necessarily for every player in the market or for the status quo ante
  - Mixed views of leveraged loans as a product

# Institutional Regulation

# Institutional Regulation

Institution	Old Regime	New Regime
Systemically important non-banks	Varies. Usually no consolidated supervision	Fed supervision, heightened prudential requirements
“Large, interconnected” depository institution holding companies	Fed or OTS supervision	Fed supervision, heightened prudential requirements
Non-bank affiliates of banks engaged in bank-permissible activities	Varies.	Bank-like supervision of bank permissible activities
Functionally regulated non-bank subs of FHCs	Fed restricted from supervising	Fed freer to supervise
Hedge funds and private equity funds	With some exceptions, no significant regulation	Generally required to register under Advisers Act
Swap dealers and major swap participants	Varies. Participants often not regulated	SEC/CFTC registration; conduct, capital, margin standards

# Product and Activity Regulation

# Product Regulation

Provision	Major Requirements	Sleeper Issue
Securitization risk retention	“Securitizer” and/or “originator” must retain 5% of the risk. Except when they don’t.	Underwriting standards for exempt products – a new common reference point?
Credit ratings reform	Changes to NRSRO regulation; review of references to credit ratings in regulations; potential automatic assignment of agencies to ABS deals	Quest for rating agency alternatives – fruitless quest or rhetorical question?
Volcker Rule	Restricts proprietary trading and investment in “private equity and hedge funds” by banks and their “subsidiaries and affiliates”	Less important to most players than commonly thought. But will the need to correct a technical error create an open season for Dodd-Frank amendments?

# Underrated Dodd-Frank Impacts

# Underrated Dodd-Frank Impacts

---

- Office of Financial Research
- Mandatory stress tests
- Regulation of systemically important non-bank firms
- Broader reach for already strengthened prudential standards on capital, liquidity, risk management, and incentive compensation

---

# Mark-To-Market

# FASB Proposal: Accounting for Financial Instruments

## Summary of Proposal

- Exposure Draft issued by FASB in May 2010
  - Comments were due on September 30, 2010
  - Currently over 1700 comment letters received by FASB
  - Public roundtables to occur in October 2010
- Impacts classification and measurement, impairment and hedge accounting
  - Applies to all reporting entities and most financial instruments
  - Significantly expands the use of fair value accounting
  - Eliminates the HFS and HFI classifications currently applicable to loans
  - Differs significantly from IFRS 9 and IASB's proposed impairment model

# FASB Proposal: Accounting for Financial Instruments

## Classification and Measurement

- Proposed classification/measurement categories:
  - Fair value through net income or Other Comprehensive Income
  - Amortized cost – limited to short term receivables/payables

**Note:** Classification must be designated at the date of purchase/origination of the loan and **cannot** be reassessed (even if business strategy changes).

# FASB Proposal: Accounting for Financial Instruments

## Classification and Measurement

- Potential F/S impacts of the Proposal:
  - All purchased/originated loans will be fair valued on the balance sheet
  - There will likely be an increase in level 3 fair value measurements
  - All loan commitments will be recognized and fair valued at the commitment date (regardless if not considered derivatives)
- Potential implementation issues:
  - Financial reporting systems will need to be modified
  - Systems will need to track both amortized cost and fair value amounts
  - There will likely be an increased reliance on valuation models
  - Fair value information will need to be produced on an accelerated timeline

---

# FASB Proposal: Accounting for Financial Instruments

## Credit Impairment

- Proposed impairment model:
  - Single impairment model applicable to all financial assets
  - Impairment continues to be based on an incurred loss model
  - Required to consider past events and existing conditions but cannot consider future events
  - Permitted to assess impairment on a pool basis or an asset by asset basis

# SFAS 167: A Primer

## **Stated Objective of the FASB:**

- “The objective of this statement is to amend certain requirements of FASB Interpretation No. 46, Consolidation of Variable Interest Entities, to improve financial reporting by enterprises involved with variable interest entities and to provide more relevant and reliable information to users of financial statements”.

## **Approach:**

- SFAS 167 determines whether an entity has variable interests through analysis of the entity’s assets, liabilities, equity and other contracts.
- Next, the statement attempts to identify the Primary Beneficiary (i.e. the party to consolidate).
- The FASB states that it attempts to replace the quantitative approach of FIN 46(R) with an approach that is expected to be “primarily qualitative”.
- Actual interpretation by accountants appears more focused on quantitative measurements.

# FASB 167

No obligation to absorb losses, but accountants say sub fees could be "potentially significant"
