DATE: April 12, 2007

SUBJECT: Fails to Deliver Pre- and Post-Regulation SHO - Update

This memorandum updates summary data on fails to deliver through March 2007. It examines fails to deliver before and after the implementation of the Rule 203 of Regulation SHO. The data, as reported by NSCC, covers all stocks with aggregate fails to deliver of 10,000 shares or more. The period from April 1, 2004 to December 31, 2004 is defined as the pre-Rule period.[1] The period from January 1, 2005 to March 30, 2007 is defined as the post-Rule period.[2] The primary results are as follows:

- The average daily aggregate fails to deliver declined by 29.5% after the effective date of Regulation SHO.
- The average daily number of securities with aggregate fails of at least 10,000 shares declined by 5.8% after the effective date of Regulation SHO.
- The average daily number of fails to deliver positions declined by 15.1%.
- The average age of a fail position declined by 25.5% after the effective date of Regulation SHO.
- The average daily aggregate new fails to deliver increased by 7.8%.[3]
- The average daily number of new fails to deliver positions declined by 3.4%.
- The average daily number of threshold securities declined by 39.0% from the pre- to post-Rule periods. The average daily number of threshold securities declined by 26.70% since January 2005.[4]

[1] August 9, November 3 and November 4, 2004 were missing from the dataset. The previous day's fails data was used to fill-in the missing data for these dates.
[2] Due to data problems caused by the fact that the NASDAQ and Archipelago exchanges did not generate threshhold lists on 1/2/2007, our report excludes all data from this day.
[3] New fails are defined as fail positions with age equal to 1 day. The NSCC data only shows the oldest age position for each clearing identifier. Thus, these numbers potentially undercount new fails. However, if anything, there is less undercounting after the Rule since the number of clearing positions declined by 15% after the Rule. Thus, the bias works against finding a decline in new fails after the Rule.
[4] To be included on the threshold security list a security needs to have aggregate fails to deliver of 10,000 shares or more and at least 0.5% of total shares outstanding for five consecutive settlement days. A security remains on the list until it has five consecutive settlement days with fails below these criteria.

SEC_OEA_FCIC_000819

- The average daily fails of threshold securities declined by 52.9 %.
- Comparing March 2007 to January 2005, average daily fails increased by 4.6%.
- A total of 10304 securities "graduated" from the threshold list since January 10, 2005 representing 7.5 billion shares in fails.

Table 1 shows the average daily fails to deliver statistics pre- and post-Rule for all securities with aggregate fails to deliver of 10,000 shares or more. Seven of the eight measures show declines after Rule 203 was implemented.

Figure 1 shows the average daily aggregate fails to deliver from April 2004 to March 2007. During the first three quarters of the post-Rule period (from the first quarter of 2005 to the third quarter of 2005) average daily fails showed a downward trend. However, from the fourth quarter of 2005 to the present average daily fails appears to be on the increase.

Table 2 shows the summary statistics for the securities that were on the published threshold lists from January 10, 2005 to March 30, 2007. On an average day, there were about 312 securities on the threshold list. These threshold lists securities had average of 1282 fails positions representing 188 million shares.

Given that any open fails prior to a security's addition to the threshold list are exempt from the close-out provisions of the Rule (grandfathered) and that the mandatory close-out requirements do not apply until day 14 for any new fails, it makes sense to examine how fast the fails are resolved for these threshold securities. The average security spent about 27 days on the threshold list during this period. About 50% of securities remain on the threshold lists after 10 days of their addition. About 30% of securities remain on the threshold list after 20 days and about 21% of securities remain on the threshold list after 30 days.

Tables 2A and 2B compare first month of Regulation SHO to the current month. The average daily number of threshold list securities has declined 26.70% from January 2005 to March 2007. During the same period, the average daily shares of fails of threshold securities increased by 8.7%. Lastly, average daily shares of fails for all securities increased by 4.6%..

To answer the question of whether inclusion on the threshold list has any impact on a securities fails to deliver, we examine the change in fails from the first day on the threshold list to the last day on the threshold list.[5] We find that an average of 311.8 fails positions representing 22.4 million shares are closed out each day for threshold list securities. Figure 2 shows that securities see net reductions in the number of fail positions the longer they are on the threshold list both in the pre- and post-Rule periods.

[5] We assume that a stock that drops from the threshold list has a drop in fails equal to its fails on its last threshold list.

These declines include new fails positions being added and resolved. Since these numbers are net of new fail positions, they are a lower bound for the number of grandfathered positions resolved.

More importantly, Figure 2 shows that fail positions are getting closed out more quickly during the post-Rule period than in the pre-Rule period. In the post-Rule period, about 40% of fail positions in threshold list securities get resolved after 5 days, about 60% after 8 days and about 70% after 11 days. In the pre-Rule period, about 40% of fail positions in threshold list securities get resolved after 9 days, about 60% after 20 days and about 70% after 28 days. Thus, threshold securities fails get resolved 4 to 17 days quicker after the Rule. This evidence is consistent with the mandatory close-out provisions of the Rule (and the anticipation of the mandatory close-out provisions) and the publication of the threshold lists being effective at resolving large fails situations.

Table 3 displays average daily threshold securities by market. Across all exchanges 2.45% of issues were on the threshold list.

SUBJECT: Fails to Deliver Pre- and Post-Regulation SHO - Update

This memorandum updates summary data on fails to deliver through May 2007. It examines fails to deliver before and after the implementation of the Rule 203 of Regulation SHO. The data, as reported by NSCC, covers all stocks with aggregate fails to deliver of 10,000 shares or more. The period from April 1, 2004 to December 31, 2004 is defined as the pre-Rule period.[1] The period from January 1, 2005 to May 31, 2007 is defined as the post-Rule period.[2] The primary results are as follows:

- The average daily aggregate fails to deliver declined by 27.0% after the effective date of Regulation SHO.
- The average daily number of securities with aggregate fails of at least 10,000 shares declined by 4.8% after the effective date of Regulation SHO.
- The average daily number of fails to deliver positions declined by 14.0%.
- The average age of a fail position declined by 27.4% after the effective date of Regulation SHO.
- The average daily aggregate new fails to deliver increased by 12.6%.[3]
- The average daily number of new fails to deliver positions declined by 2.0%.
- The average daily number of threshold securities declined by 38.0% from the pre- to post-Rule periods. The average daily number of threshold securities declined by 14.9% since January 2005.[4]

[1] August 9, November 3 and November 4, 2004 were missing from the dataset. The previous day's fails data was used to fill-in the missing data for these dates.
[2] Due to data problems caused by the fact that the NASDAQ and Archipelago exchanges did not generate threshhold lists on 1/2/2007, our report excludes all data from this day.
[3] New fails are defined as fail positions with age equal to 1 day. The NSCC data only shows the oldest age position for each clearing identifier. Thus, these numbers potentially undercount new fails. However, if anything, there is less undercounting after the Rule since the number of clearing positions declined by 15% after the Rule. Thus, the bias works against finding a decline in new fails after the Rule.

SEC_OEA_FCIC_000830

- The average daily fails of threshold securities declined by 50.8 %.
- Comparing May 2007 to January 2005, average daily fails increased by 41.6%.
- A total of 11345 securities "graduated" from the threshold list since January 10, 2005 representing 8.2 billion shares in fails.

Table 1 shows the average daily fails to deliver statistics pre- and post-Rule for all securities with aggregate fails to deliver of 10,000 shares or more. Seven of the eight measures show declines after Rule 203 was implemented.

Figure 1 shows the average daily aggregate fails to deliver from April 2004 to May 2007. During the first three quarters of the post-Rule period (from the first quarter of 2005 to the third quarter of 2005) average daily fails showed a downward trend. However, from the fourth quarter of 2005 to the present average daily fails appears to be on the increase.

Table 2 shows the summary statistics for the securities that were on the published threshold lists from January 10, 2005 to May 31, 2007. On an average day, there were about 320 securities on the threshold list. These threshold lists securities had average of 1309 fails positions representing 195 million shares.

Given that any open fails prior to a security's addition to the threshold list are exempt from the close-out provisions of the Rule (grandfathered) and that the mandatory close-out requirements do not apply until day 14 for any new fails, it makes sense to examine how fast the fails are resolved for these threshold securities. The average security spent about 26 days on the threshold list during this period. About 50% of securities remain on the threshold lists after 10 days of their addition. About 30% of securities remain on the threshold list after 20 days and about 21% of securities remain on the threshold list after 30 days.

Tables 2A and 2B compare first month of Regulation SHO to the current month. The average daily number of threshold list securities has declined 14.90% from January 2005 to May 2007. During the same period, the average daily shares of fails of threshold securities increased by 12.4%. Lastly, average daily shares of fails for all securities increased by 41.6%..

To answer the question of whether inclusion on the threshold list has any impact on a securities fails to deliver, we examine the change in fails from the first day on the threshold list to the last day on the threshold list.[5] We find that an average of 321.9 fails positions representing 23.0 million shares are closed out each day for threshold list

[4] To be included on the threshold security list a security needs to have aggregate fails to deliver of 10,000 shares or more and at least 0.5% of total shares outstanding for five consecutive settlement days. A security remains on the list until it has five consecutive settlement days with fails below these criteria.
[5] We assume that a stock that drops from the threshold list has a drop in fails equal to its fails on its last threshold list.

SEC_OEA_FCIC_000831

securities. Figure 2 shows that securities see net reductions in the number of fail positions the longer they are on the threshold list both in the pre- and post-Rule periods. These declines include new fails positions being added and resolved. Since these numbers are net of new fail positions, they are a lower bound for the number of grandfathered positions resolved.

More importantly, Figure 2 shows that fail positions are getting closed out more quickly during the post-Rule period than in the pre-Rule period. In the post-Rule period, about 40% of fail positions in threshold list securities get resolved after 5 days, about 60% after 8 days and about 70% after 11 days. In the pre-Rule period, about 40% of fail positions in threshold list securities get resolved after 9 days, about 60% after 20 days and about 70% after 28 days. Thus, threshold securities fails get resolved 4 to 17 days quicker after the Rule. This evidence is consistent with the mandatory close-out provisions of the Rule (and the anticipation of the mandatory close-out provisions) and the publication of the threshold lists being effective at resolving large fails situations.

Table 3 displays average daily threshold securities by market. Across all exchanges 2.90% of issues were on the threshold list.

DATE: July 21, 2006

SUBJECT: Fails to Deliver Pre- and Post-Regulation SHO

This memorandum provides summary data on fails to deliver through May 2006. It examines fails to deliver before and after the implementation of the Rule 203 of Regulation SHO. The data, as reported by DTCC, cover all stocks with aggregate fails to deliver of 10,000 shares or more.

Table 1 shows the average daily fails to deliver statistics pre- and post-Rule for all stocks with aggregate fails to deliver of 10,000 shares or more. All six measures show declines after Rule 203 was implemented. The period from April 1, 2004 to December 31, 2004 is defined as the pre-rule period.[1] The period from January 1, 2005 to May 31, 2006 is defined as the post-rule period.

- The average daily aggregate fails to deliver declined by 34.0% after the effective date of Regulation SHO.
- The average daily number of securities with aggregate fails of at least 10,000 shares declined by 6.5% after the effective date of Regulation SHO.
- The average daily number of fails to deliver positions declined by 15.3%.
- The average age of a fail position declined by 13.4% after the effective date of Regulation SHO.
- The average daily number of threshold securities declined by 38.2% from the pre- to post-rule periods.
- The average daily fails of threshold securities declined by 52.4 %.

Table 2 shows the summary statistics for the securities that were on the published threshold lists from January 10, 2005 to May 31, 2006. On an average day, there were about 312 securities on the threshold list. These threshold lists securities had an average of 1,346 fails positions representing 189 million shares.

- The average daily number of threshold securities declined by 29.8% from January 2005 to May 2006.

Table 3 displays average daily threshold securities by market.

[1] August 9, November 3 and November 4, 2004 were missing from the dataset. The previous day's fails data was used to fill-in the missing data for these dates.

Produced by OEA

SEC_OEA_FCIC_000848

- For exchange-listed issues, the average daily number of threshold securities during May 2006 was about 2.18% of all issues.
- For all issues traded in the U.S. (including OTCBB and Pink Sheets), the average daily number of threshold securities during May 2006 was about 0.38% of all issues.

Table 4 shows additional summary statistics for securities on the published threshold lists from January 10, 2005 to May 31, 2006.

- Over this period, the average daily number of threshold list securities was about 312 representing about 189 million shares in fails in 1,347 fail positions.
- A total of 6,223 securities "graduated" from the threshold list since January 10, 2005 representing 4.5 billion shares in initial fails.[2]
- The 6 securities that have "persisted" on the threshold list since January 10, 2005 have seen their fails drop by 68.6%.

We also estimate the amount of grandfathered fails relative to total fails for threshold list securities for the period from January 7, 2005 to December 31, 2005. Since the DTCC fails data do not allow us to definitively identify new fails or grandfathered fails and when they are closed out, we need to make a number of assumptions to estimate this number. We assume any increase in fails for a particular clearing firm on a given day represents a new fail created on that day. We estimate the percentage of grandfathered fails relative to total fails for each day during our period and then average those percentages.

- The average daily percentage of grandfathered fails to total fails for stocks on the threshold list is estimated to be about 48%.

We also estimate how many fails that existed prior to the implementation of the Regulation SHO continue to persist. We compare the fails on January 3, 2005 to fails on March 31, 2006 for all stocks with aggregate fails to deliver of 10,000 shares or more.

- 99.2% of the fails that existed on January 3, 2005 are no longer outstanding as of March 31, 2006.

[2] Initial fails are the number of fails on the first day a security is included on the threshold list.

Table 1
Summary Statistics on Fails to Deliver
Pre- and Post-Rule

Measure	Pre-Rule	Post-Rule	Change	Percent Change
Number of Days	189	353		
Average Daily Aggregate Fails (millions)	810.7	534.7	-276.0	-34.0%
Average Daily Number of Securities	2,735.5	2,557.3	-178.2	-6.5%
Average Daily Number of Fail Positions	10,747.1	9,106.5	-1,640.6	-15.3%
Average Age per Position (days)	35.7	30.9	-4.8	-13.4%
Average Daily Number of Securities on Threshold List	298.2	184.4	-113.8	-38.2%
Average Daily Aggregate Fails for Securities on Threshold List (millions)	131.6	62.7	-68.9	-52.4%

Notes:
1) Statistics are estimated using raw Continuous Net Settlement fails data from the DTCC that include securities with aggregate daily fails to deliver of 10,000 shares or more.
2) Threshold list figures include only NYSE, Amex and NASDAQ securities that meet the threshold list requirements. Since no threshold lists were published prior to January 10, 2005, the threshold list securities are estimated. To be consistent, the threshold list estimates for the post-Rule period is also used. Our estimates of the post-Rule threshold list securities are consistent with the threshold lists published by the NYSE, Amex and NASDAQ.
4) The pre-Rule period is from April 1, 2004 to December 31, 2004. The post-Rule period is from January 1, 2005 to May 31, 2006.

SEC_OEA_FCIC_000851

Table 3
Average Daily Threshold Securities by Market
May 2006

Market Class	Number of Threshold Issues	Total Number of Issues	% of Total Issues
NYSE	51	3,598	1.42%
Amex	52	1,376	3.78%
Archipelago	1	194	0.52%
Nasdaq NM	55	2,766	1.99%
Nasdaq SC	27	585	4.62%
All Exchanges	186	8,519	2.18%
OTCBB	74.6	3,287	2.27%
Exchanges + OTCBB	260.6	11,806	2.21%
Other OTC	37.4	66,681	0.06%
Total	298	78,487	0.38%
OTCBB + Other OTC**	112	69,968	0.16%

Notes:
1) Statistics are calculated using data from the threshold lists published by NYSE, Amex, Nasdaq, and Archipelago.
2) Dually listed securities are counted twice in the total number of issues for all exchanges (8,519). However, the number of dually listed securities is small. For example, there are approximately 11 securities dually listed on NASDAQ and the NYSE.
3) The total number of issues for Other OTC (66,681) includes non-reporting issues. NASD Rule 3210, which became effective July 3, 2006, applies the Regulation SHO close-out framework to non-reporting OTC equity securities.

Table 4
Summary Statistics for Securities on the Published Threshold List
January 10, 2005 to May 31, 2006

Measure	Value
Average Daily Number of Stocks	311.6
Average Daily Aggregate Fails (millions)	188.6
Average Daily Number of Positions	1,346.6
Number of Graduates from Threshold List	6,223
Total Initial Fails of Graduates from Threshold List (millions)	4,454.4
Number of Persistent Threshold List Securities	6
Total Initial Fails of Persistent Threshold List Securities (millions)	15.3
Total Current Fails of Persistent Threshold List Securities (millions)	4.8
Change in Fails for Persistent Threshold List Securities	-68.6%

Notes:
1) Statistics are estimated using two data sources: (1) raw CNS fails data from the DTCC that include securities with aggregate daily fails to deliver of 10,000 shares or more; and (2) the threshold lists published by NYSE, Amex, NASDAQ, and Archipelago.
2) A "graduate" is a security that dropped from the threshold list during this period.
3) A "persistent" threshold list security is any security symbol that was continuously on the list during the entire period.

Subject: RE: Fails to Deliver Pre- and Post-Regulation SHO - Update

The 17.7 decrease applies to aggregate fails in all securities.

In the case of aggregate fails in threshold securities there were two issues, GSPC and PLCK which had an unusually high number of failed shares. If we remove these two issues from the tabulations then the number of fails in threshold securities becomes 206.7 million, a decrease of 12.7 million shares or 5.8% from January 2005. These numbers are also very close to those recorded for February 2006.

It is also worth noting that the distribution of both aggregate fails in all securities and aggregate fails in threshold securities tend to be positively skewed. This means that even lacking specific outliers such as those identified above, the top several observations will tend to have a very strong influence on the summary figures.

Subject: RE: Fails to Deliver Pre- and Post-Regulation SHO - Update

Thanks -- would this 17.7% decrease be in average aggregate fails for all securities, or just in threshold fails, and what would be the figure for the other type? Thanks.

Subject: RE: Fails to Deliver Pre- and Post-Regulation SHO - Update

Tom Dowling, the programmer on this project, generated a list of average daily fails by security, sorted in descending order. This revealed that five securities had an unusually large number of fails: RSHN, GSPG, PLKC, PHBT and GWBT. To see the impact of these five securities on the statistics, consider the figures reported for

"average daily aggregate fails" in Table 2B. If these five securities are removed from consideration, the new figure for March 2006 is 562.6 million shares, a decrease of 121.1 million shares or 17.7% from January 2005.

Subject: RE: Fails to Deliver Pre- and Post-Regulation SHO - Update

Hi Peter,

Are there particular reasons that you know of regarding why some of the Table 2B figures have spiked up?

In particular, the average daily aggregate fails is up 10%

and the average daily aggregate fails for threshold securities is up 31.1%

(In January, they were down 30.5% and 26.1% respectively, so this is quite a leap)

Thanks,

Subject: Fails data you requested

Attachments: TotalFailsUNIVERSE063005.xls; FailsInThresholdUNIVERSE063005.xls; PossibleViolationsUNIVERSE.csv

Bob and Laura,

Attached are three spreadsheets that may help you decide which clearing members you might want to target. They are based on a program that Amy wrote to identify potential fails close-out violations. I added a few columns to the spreadsheets to give you information on recent increases in fails or potential violations (Note: much of the explanation is based on Amy's earlier work). The data DTCC provides us only specifies fails by clearing id, so you will have to identify the clearing member names.

TotalFailsUNIVERSE063005.xls (...

FailsInThresholdUNIVERSE063005...

PossibleViolationsUNIVERSE.csv...

TotalFailsUNIVERSE063005.xls gives the average daily number of shares failed by each clearing id (TotalSharesFailed_Mean) for the periods from January 7, 2005 to April 5, 2005 and from January 7, 2005 to June 30, 2005. Column D shows the change in the average daily number of shares by clearing member id and is sorted by the firms that showed the biggest jumps in average daily number of shares failed since April 5, 2005. This will help you identify whether there are any new firms with large aggregate fails that were not of interest in the first go-around with Laura.

FailsInThresholdUNIVERSE063005.xls gives the frequency of clearing members' failures in threshold stocks and how often they appear to violate the close-out provision of Reg SHO. The only stocks included are stocks that were on the threshold list for at least four consecutive days. The fails are for the period of January 7, 2005 to June 30, 2005 (except where noted).

- NewPosition_sum: the number of times that a clearing member increased their fail position in stock that had been on the threshold list for at least four days.
- NewPositionShares_sum: same as NewPosition_sum but measured in total shares of fail increases.
- ChkViolation1_sum: the number of times that a clearing member had a fail position greater than their grandfathered position for at least 14 consecutive days.
- ChkViolation2_sum: the number of times that a clearing member had a fail position greater than their grandfathered position for at least 17 consecutive days.
- ChkViolation3_sum: the number of times that a clearing member had a fail position greater than their grandfathered position for at least 20 consecutive days.
- ChkViolation1_sum40505: the number of times that a clearing member had a fail position greater than their grandfathered position for at least 14 consecutive days for the period from January 7, 2005 to April 5, 2005.
- Change: the number of times that a clearing member had a fail position greater than their grandfathered position for at least 14 consecutive days for the period from April 6, 2005 to June 30, 2005. This will show you which firms had the most potential violations recently.

Grandfathered position: a clearing member's fail position on the third day that a stock is on the threshold list. If the clearing member's position is below the original grandfathered position, the

grandfathered position is reset to be the clearing member's smallest position since the 3rd day the stock was on the threshold list.
Note that ChkViolation only gives possible violations. It is based on the relatively strict "LIFO" method of clearing out the newest fails first, while the enforcement of the rule might actually be based on more of a "FIFO" approach of clearing out the oldest non-grandfathered fails first. The LIFO method is unlikely to miss real violations. Focusing some time on real violations will give you a chance to examine the pre-borrow requirements (not to mention that it helps you locate the bad apples).

PossibleViolations.csv gives the daily fails positions for the clearing members in stocks where they appear to violate the close-out provisions as defined above (i.e., the clearing member had a fail position greater than their grandfathered position for at least 14 consecutive days). The only stocks included are stocks that were on the threshold list for at least four consecutive days. The fails are for the period of January 7, 2005 to June 30, 2005. Many of the variables are self-explanatory, but here are the ones that might be more difficult to figure out:

- Failed_Amount_In_Shares: The clearing member's CNS fail position in the stock
- NewFails: the change in the clearing member's CNS fail position
- CumNewThresholdFails: the level of fails over and above the clearing member's grandfathered position
- CloseOutDays: the number of consecutive days in which the clearing member has had a fail position that is larger than their grandfathered position.

Let me know if you have questions or need more analysis.

Thanks,
Tim McCormick

DATE: October 6, 2006

SUBJECT: Fails to Deliver Pre- and Post-Regulation SHO - Update

This memorandum updates summary data on fails to deliver through September 2006. It examines fails to deliver before and after the implementation of the Rule 203 of Regulation SHO. The data, as reported by NSCC, covers all stocks with aggregate fails to deliver of 10,000 shares or more. The period from April 1, 2004 to December 31, 2004 is defined as the pre-Rule period.[1] The period from January 1, 2005 to September 30, 2006 is defined as the post-Rule period. The primary results are as follows:

- The average daily aggregate fails to deliver declined by 33.2% after the effective date of Regulation SHO.
- The average daily number of securities with aggregate fails of at least 10,000 shares declined by 6.6% after the effective date of Regulation SHO.
- The average daily number of fails to deliver positions declined by 15.6%.
- The average age of a fail position declined by 18.2% after the effective date of Regulation SHO.
- The average daily aggregate new fails to deliver increased by 1.0%.[2]
- The average daily number of new fails to deliver positions declined by 5.2%.
- The average daily number of threshold securities declined by 39.0% from the pre- to post-Rule periods. The average daily number of threshold securities declined by 44.2% since January 2005.[3]
- The average daily fails of threshold securities declined by 54.0 %.
- Comparing September 2006 to January 2005, average daily fails decreased by 12.5%.

[1] August 9, November 3 and November 4, 2004 were missing from the dataset. The previous day's fails data was used to fill-in the missing data for these dates.
[2] New fails are defined as fail positions with age equal to 1 day. The NSCC data only shows the oldest age position for each clearing identifier. Thus, these numbers potentially undercount new fails. However, if anything, there is less undercounting after the Rule since the number of clearing positions declined by 15% after the Rule. Thus, the bias works against finding a decline in new fails after the Rule.
[3] To be included on the threshold security list a security needs to have aggregate fails to deliver of 10,000 shares or more and at least 0.5% of total shares outstanding for five consecutive settlement days. A security remains on the list until it has five consecutive settlement days with fails below these criteria.

- A total of 7486 securities "graduated" from the threshold list since January 10, 2005 representing 5.3 billion shares in fails.

Table 1 shows the average daily fails to deliver statistics pre- and post-Rule for all securities with aggregate fails to deliver of 10,000 shares or more. All but one of the eight measures show declines after Rule 203 was implemented.

Figure 1 shows the average daily aggregate fails to deliver from April 2004 to September 2006. During the first three quarters of the post-Rule period (from the first quarter of 2005 to the third quarter of 2005) average daily fails showed a downward trend. However, from the fourth quarter of 2005 to the third quarter of 2006 average daily fails has appeared to level out. [4]

Table 2 shows the summary statistics for the securities that were on the published threshold lists from January 10, 2005 to September 30, 2006. On an average day, there were about 298 securities on the threshold list. These threshold lists securities had average of 1282 fails positions representing 181 million shares.

Given that any open fails prior to a security's addition to the threshold list are exempt from the close-out provisions of the Rule (grandfathered) and that the mandatory close-out requirements do not apply until day 14 for any new fails, it makes sense to examine how fast the fails are resolved for these threshold securities. The average security spent about 28 days on the threshold list during this period. About 51% of securities remain on the threshold lists after 10 days of their addition. About 32% of securities remain on the threshold list after 20 days and about 23% of securities remain on the threshold list after 30 days.

Tables 2A and 2B compare first month of Regulation SHO to the current month. The average daily number of threshold list securities has declined 44.2% from January 2005 to September 2006. During the same period, the average daily shares of fails of threshold securities declined by 42.7%. Lastly, average daily shares of fails for all securities declined by 12.5%..

To answer the question of whether inclusion on the threshold list has any impact on a securities fails to deliver, we examine the change in fails from the first day on the threshold list to the last day on the threshold list.[5] We find that an average of 302.3 fails positions representing 20.3 million shares are closed out each day for threshold list securities. Figure 2 shows that securities see net reductions in the number of fail positions the longer they are on the threshold list both in the pre- and post-Rule periods.[6]

[4] The averages are slightly inflated in October due to a fail position of 789,201,500 shares on 10/11/05 in the warrants of a low-priced security.
[5] We assume that a stock that drops from the threshold list has a drop in fails equal to its fails on its last threshold list.
[6] We assume that a stock that drops from the threshold list has a drop in fails equal to its fails on its last threshold list.

These declines include new fails positions being added and resolved. Since these numbers are net of new fail positions, they are a lower bound for the number of grandfathered positions resolved.

More importantly, Figure 2 shows that fail positions are getting closed out more quickly during the post-Rule period than in the pre-Rule period. In the post-Rule period, about 40% of fail positions in threshold list securities get resolved after 5 days, about 60% after 8 days and about 70% after 11 days. In the pre-Rule period, about 40% of fail positions in threshold list securities get resolved after 9 days, about 60% after 20 days and about 70% after 28 days. Thus, threshold securities fails get resolved 4 to 17 days quicker after the Rule. This evidence is consistent with the mandatory close-out provisions of the Rule (and the anticipation of the mandatory close-out provisions) and the publication of the threshold lists being effective at resolving large fails situations.

Table 3 displays average daily threshold securities by market. Across all exchanges 1.83% of issues were on the threshold list. Two markets stand out, the AMEX with 3.53%, and the Nasdaq Small Cap with 2.93%.

[8] An "add" is any security that was added to the threshold list after January 10, 2005.
[9] A "graduate" is a security that dropped from the threshold list during this period.
[10] A "persistent" threshold list security is any security symbol that was continuously on the list during the entire period. There are no securities on the threshold list any more.

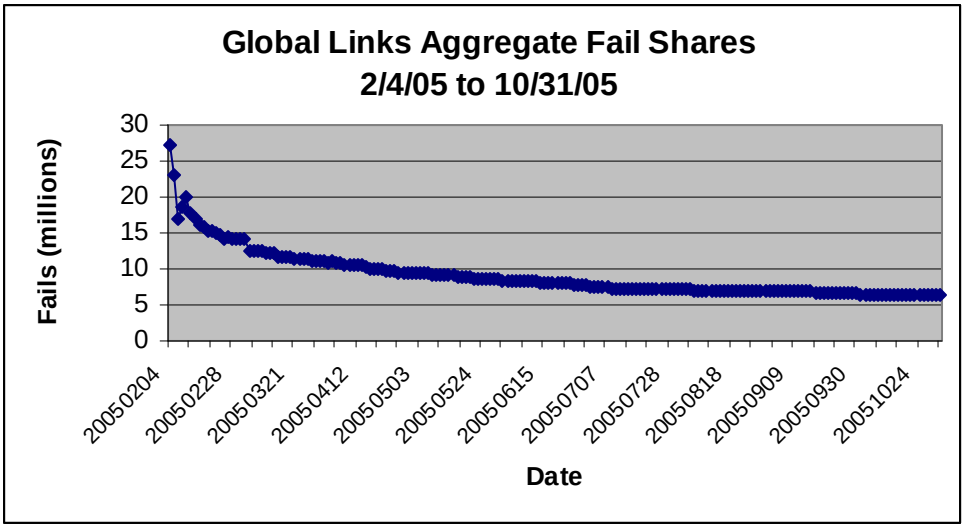
Global Links

Ever since the stock started rallying, the closing out of fails has really slowed down. In April, 1.5 million fail shares were closed out. In October, only 0.3 million fail shares were closed out. At that rate, it will take another 21 months to fully close out the position. Is there a short squeeze going on? The stock is up almost 400% since June and is up 2400% from the low on February 1, 2005.



Background (according to web postings):

On February 1, 2005, the Company implemented a one for 350 reverse split of its authorized and outstanding shares of common stock. The number of authorized and outstanding shares of the Company's common stock following the February 1, 2005 reverse split is 5,428,571 and 1,158,064, respectively according to company announcements. The stock opened at $0.10 on February 1, 2005 and sank to a low of $0.0008 in a matter of hours. The company reported on March 15, 2005, that there was 4,028,362 common shares issued and outstanding. However, there are 15 million unregistered "B" shares held by company insiders. These shares purport to carry 20 common votes with each "B" share, and conversion rights to 10 common shares for each "B" share converted. That's a diluted shares outstanding of 154 million.

Also, if conversion rights, voting rights, or number of "B" shares were not subject to the same reverse split, then public holders rights have seen a diminishment by a factor of 122,500. Prior company filings indicate that common holders were never asked or permitted to vote on these reverse-splits, and the substantial elimination of public holders rights was accomplished solely by the vote of President/CEO Mr. Frank Dobrucki's "B" shares.

SHO Status Report

Results:

- Since the effective date of Regulation SHO (i.e. Jan. to Dec.):
  - The average daily aggregate fails to deliver of 10,000 shares or more has declined by 21.9%.
  - The average daily number of threshold securities has declined by 33.6%.
  - The average daily fails of threshold securities has declined by 13.2%.[1]

- Since the effective date of Regulation SHO through December:
  - The total number of securities on the NYSE threshold list has declined by 30%.
  - The total number of securities on Nasdaq's threshold list has declined by 36%.
  - The total number of securities on AMEX's threshold list has declined by 21%.

- Since the effective date of Regulation SHO through Dec., the total number of threshold securities on the NYSE, Nasdaq and AMEX threshold lists collectively has declined by 33%.

- On an average day, approximately 1% of all trades by dollar value fail to settle. Put another way, 99% of all trades by dollar value settle on time without incident.

- The possible small number of persistent fails is likely due to the grandfather provision.

What are we doing now?

- OCIE/SRO Sweeps
  - OCIE, NASD and NYSE have completed examinations of approximately 45 separate firms to determine compliance with Regulation SHO. We are reviewing the examination reports as they become available.

- NASD's Inquiry into Outliers
  - The NASD conducted inquiries into 148 securities to determine why these securities have remained on its threshold list for a period in excess of 40 days. As a result of these inquiries:
    - 78% had significant grandfathered positions that have remained open for the period the security has been on the list.
    - 20% had open fail positions held by clearing firms that clear primarily for options market makers.
  - The NYSE has conducted a review of 5 securities with substantial aged fail positions from 7/1/05 through 9/23/05. The fails in each security were attributable to one firm in particular. For the most part, this firm stated that positions were not being closed out because the fails were attributable to short sales effected to hedge pre-existing options positions.

- Rulemaking
  - 3210 – Applies close-out requirements on non-reporting companies with at least 10,000 fails to deliver and has a last reported sales price that would value the aggregate value of the fails positions at $50,000 or more for 5 consec. days. The proposal was published in the FR for notice and comment on November 16, 2005. We are awaiting filing of a response to comments by the NASD.
  - 3360 – Expands short interest reporting requirement to OTC securities. The proposed rule change was published in the FR for notice and comment on November 3, 2005. We intend to approve the rule by Feb. 6, 2006.

- Continued Staff Outreach to Implement the Rule
  - Qs&As – the Staff continues to update its Qs&As in response to industry need for clarification/interpretation.
  - Investor piece – the Staff issued, and updates as necessary, its "Key Points About Regulation SHO."
  - Letters – the Staff responds to numerous letters/emails from investors, whether directly or through Congressman.

[1] The numbers for December were not as positive as the numbers we have seen in prior months due to the fact that there was a significant increase in December in the fails to deliver in one security in particular. This increased amount represented almost one third of the total fails to deliver for threshold securities in December. The data comparing Jan., 2005 to Nov., 2005 reflected that the average daily aggregate fails to deliver of 10,000 shares or more as reported by NSCC had declined by 39.7%, the average daily number of threshold securities had declined by 36.2%, and the average daily fails of threshold securities had declined by 41.2%.

- **Where do we go from here?**
  - OCIE/SRO Exams – Staff will review and consider the results.
  - Enforcement – SEC and SROs will consider enforcement action where warranted, but we cannot comment on non-public investigations.
  - Pilot – Ends April 28, 2006 – Staff will review and consider the results.
  - Rulemaking – Staff will commence rulemaking to amend Reg. SHO as necessary, including possible amendments to the grandfather provision if warranted.
